

THE BIG KIDS ALWAYS CAME TO US
**WHEN THEY NEEDED
SOMETHING FIXED.**
FUNNY, THEY STILL DO.

PSM has earned its reputation by improving the longevity, performance and reliability of industrial gas turbine hot parts. From ultra-low NOx retrofit combustion systems to airfoils that better resist the wear-and-tear of today's demanding duty cycles, we design and manufacture a full range of critical capital parts for large gas turbines that are less expensive and perform as well as or better than the big boys' parts that they replace. Fully compatible and available for 7FA, 501F, 6B, 7E/EA, 9E, and 501B and D series machines.

The **Proven** Alternative
